Lab Report

Data Communications

Name | Kushagra Lakhwani

Roll No | 2021UCI8036

Semester 4th

Course | CICPC12

Department of Computer Science & Engineering March 19, 2023

Abstract

The practical lab report "Data Communications" is the original and unmodified content submitted by Kushagra Lakhwani (Roll No. 2021UCI8036).

The report is submitted to *Mr. Pattetti* Department of Computer Science and Engineering, NSUT, Delhi, for the partial fulfillment of the requirements of the course (CICPC12).

1 Fourier Transform

We plot a Rectangular Pulse Signal x(t) in *Matlab* and explore its magnitude and phase spectrum of its Fourier Transform.

1.1 Matlab Code

```
close all;
% parameters of a rectangular pulse signal
w = 10; % width
A = 1; % amplitude
t = -10:0.01:10; % time vector
xt = A * rectpuls(t, w);  % rectangular pulse signal
% plot the rectangular pulse signal in the first subplot
subplot(2, 2, 1)
plot(t, xt)
xlabel('Time')
ylabel('Amplitude')
title('Rectangular pulse')
% define a range of frequencies and compute the Fourier transform at each frequency
w = -8 * pi:0.01:8 * pi; % range of frequencies
for i = 1:length(w)
    xw(i) = trapz(t, xt .* exp(-1i * w(i) .* t)); % Fourier transform
end
% plot the Fourier transform in the second subplot
subplot(2, 2, 2)
plot(w, xw)
title('Fourier transform of rect pulse: Sampling signal')
xlabel('Frequency')
ylabel('Amplitude')
% plot the magnitude spectrum of the Fourier transform in the third subplot
subplot(2, 2, 3)
plot(w, abs(xw))
title('Magnitude spectrum')
xlabel('Frequency')
ylabel('Amplitude')
% plot the phase spectrum of the Fourier transform in the fourth subplot
subplot(2, 2, 4)
plot(w, angle(xw))
title('Phase spectrum')
xlabel('Frequency')
ylabel('Amplitude')
```

1.2 Output

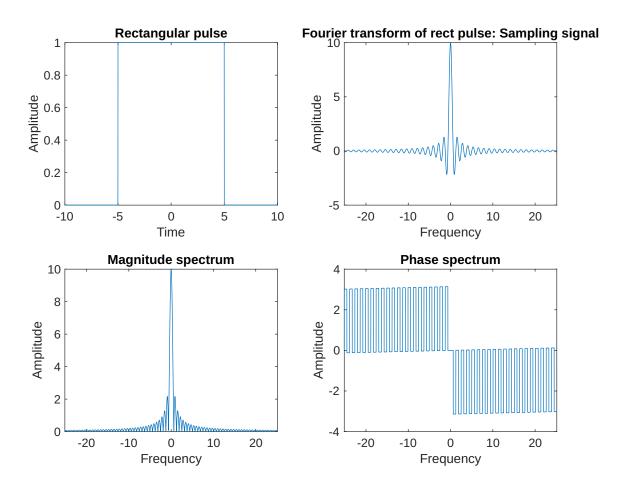

Figure 1: Fourier Transform

2 Random Density Function

Using the Gaussian random numbers we find the mean and variance.

2.1 Matlab Code

```
% Generate random numbers
data = randn(1000, 1);

% Create histogram
histogram(data, 20, 'Normalization', 'pdf');
hold on;

% Calculate mean and standard deviation
mu = mean(data);
sigma = std(data);
```

```
% Define x values for Gaussian curve
x = linspace(min(data), max(data), 100);

% Calculate y values for Gaussian curve
y = normpdf(x, mu, sigma);

% Overlay Gaussian curve
plot(x, y, 'LineWidth', 2);

% Add title and labels
title('Histogram of Random Data with Gaussian Fit');
xlabel('Data Value');
ylabel('Probability Density');

% Turn off hold
hold off;
```

2.2 Output

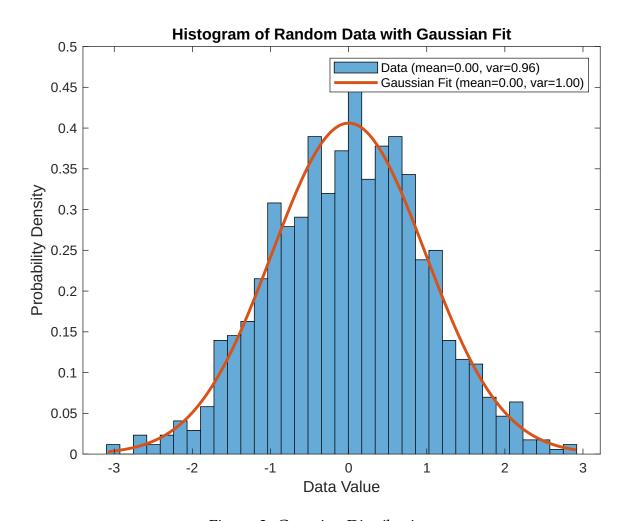

Figure 2: Gaussian Distribution

3 Quantization: Uniform

Computing the Signal to quantization Noise ratio of Uniform Quantization. Plot SNQR vs. Quantization levels.

3.1 Matlab Code

```
% Program to Compute SQNR of Uniform Quantization and Plot the SQNR vs. Quantization Levels
close all; clc;
% Signal Parameters
N = 10000;
                           % Number of samples in the signal
f = 1;
                           % Signal frequency
Fs = 1000;
                           % Sampling frequency
t = (0:N - 1) / Fs;
                          % Time vector
x = sin(2 * pi * f * t); % Signal
% Quantization Parameters
L = 2:20;
                           % Number of quantization levels to try
                           % Number of bits to represent each level
b = log2(L);
Delta = 2 ./ (L - 1);  % Step size of the quantization levels
SQNR = zeros(length(L), 1); % To store the Signal to Quantization Noise Ratio (SQNR) for each quanti
% Uniform Quantization
for i = 1:length(L)
    q = round(x / Delta(i)) * Delta(i); % Quantize the signal
    % Compute the SQNR
    noise = x - q;
    signal_power = sum(x .^2) / N;
    noise_power = sum(noise .^ 2) / N;
    SQNR(i) = 10 * log10(signal_power / noise_power);
% Plot the SQNR vs. Quantization Levels
figure;
plot(b, SQNR, 'b-o', 'LineWidth', 2);
xlabel('Number of Bits');
ylabel('Signal to Quantization Noise Ratio (dB)');
grid on;
```

3.2 Output

4 Quantization: Uniform

Computing SNR of Non-Uniform Quantization and Plot SNR vs. Quantization Levels

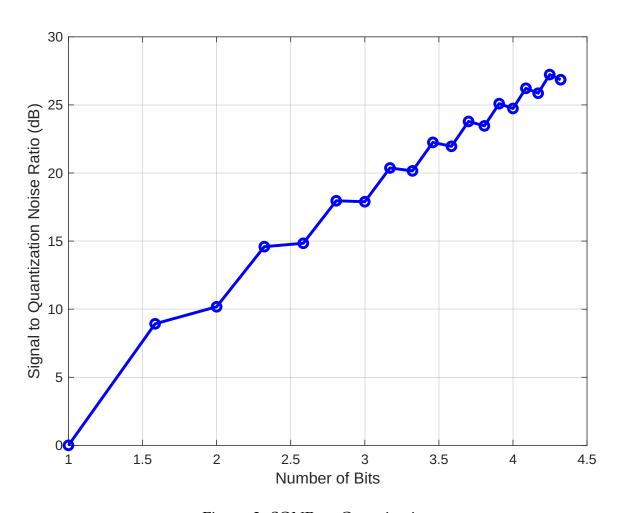

Figure 3: SQNR vs Quantization

4.1 Matlab Code

q = zeros(size(x));

```
% Program to Compute SNR of Non-Uniform Quantization and Plot the SNR vs. Quantization Levels
close all; clc;
% Signal Parameters
N = 10000;
                            % Number of samples in the signal
f = 1;
                            % Signal frequency
Fs = 1000;
                            % Sampling frequency
t = (0:N - 1) / Fs;
                            % Time vector
x = \sin(2 * pi * f * t);
                            % Signal
% Quantization Parameters
L = 2:20;
                                % Number of quantization levels to try
b = log2(L);
                                % Number of bits to represent each level
Delta = 2 . / (L - 1);
                                % Step size of the quantization levels
SQNR = zeros(length(L), 1);
                                % To store the Signal to Quantization Noise Ratio (SQNR) for each qu
% Non-Uniform Quantization
for i = 1:length(L)
```

```
% Compute quantization levels
    V = [-(L(i) - 1) / 2:1:(L(i) - 1) / 2] * Delta(i);
    % Quantize the signal
    for j = 1:N
        [val, index] = min(abs(x(j) - V));
        q(j) = V(index);
    end
    \% Compute the SQNR
    noise = x - q;
    signal_power = sum(x .^ 2) / N;
    noise_power = sum(noise .^ 2) / N;
    SQNR(i) = 10 * log10(signal_power / noise_power);
% Plot the SNR vs. Quantization Levels
figure;
plot(b, SQNR, 'b-o', 'LineWidth', 2);
xlabel('Number of Bits');
ylabel('Signal to Quantization Noise Ratio (dB)');
grid on;
```

4.2 Output

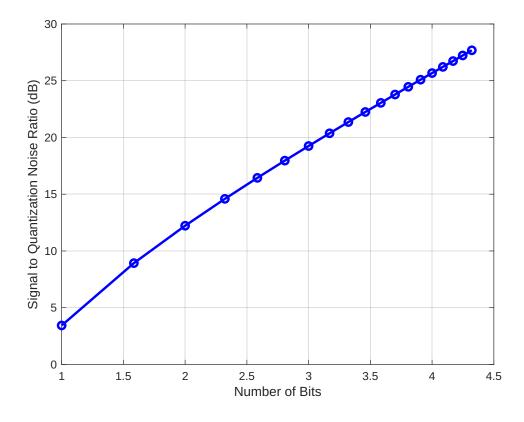

Figure 4: SQNR vs Quantization 2
